DETAILED ACTION

Restriction Requirement

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 - 12, drawn to exposure control, classified in class 348, subclass 362.
- II. Claims 13 - 29, drawn to reading out pixel pattern of solid-state image sensor, classified in class 348, subclass 294.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as in a digital camera which does not include the particular listed in the invention II "said image sensor being capable of randomly selecting one or more pixels to be read-out from said plurality of pixels; and a control circuit for reading out said electric signal from said image sensor with a pixel pattern, said pixel pattern being different among first and second operations of said camera." Likewise, invention II has a separate utility such as in a digital camera which does not include the particular listed in the invention I "a read circuit for reading-out information on accumulated charge nondestructively from said photocell array; and read controller for repeatedly activating said read circuit while said photocell array accumulates charge during exposure, to thereby

sequentially capture a plurality of image signals corresponding to a plurality of exposure times with respect to a substantially same scene." See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
